

SS-31

Locked peptide information sheet

Short Description

SS-31 (also discussed as elamipretide) is a mitochondria-targeted peptide studied in relation to mitochondrial membranes, cardiolipin, and cellular energy. TrueHold lists it as a 10 mg lyophilized premium research formula.

How It Works

SS-31 is researched for interaction with the inner mitochondrial membrane and cardiolipin. Community and published discussion often focuses on mitochondrial efficiency, oxidative-stress themes, and energy-production biology. It is not an incretin (GLP-1/GIP) compound.

Key Research Themes

- Mitochondrial membrane research
- Cellular energy
- Cardiolipin-related discussions
- Recovery and resilience
- Healthy-aging research themes

Who Commonly Asks About It

- People focused on energy and mitochondrial research
- Members tracking recovery and resilience
- People comparing mitochondrial compounds with NAD+
- Labs studying mitochondria-targeted peptides

What To Track

- Energy
- Exercise tolerance
- Recovery
- Focus
- Overall stamina notes

Shop Listing

Product	SS-31
Category	Mitochondrial research compounds
Vial	10 mg lyophilized vial
Shop	https://trueholdwellness.com/ols/products/ss-31-premium-research-formula-10-mg

Protocol Note

TrueHold shares locked information sheets for general education only. Protocol details are reviewed by the TrueHold team case by case. The bot does not provide dosing, reconstitution, or administration instructions in chat. For individualized plans, use /schedule to book with the team. Research use only.
